

on-my-bookshelf-service

Update a user property

The Patch request updates a user property, but does not change other parameters in the `user` object.

URL

```
{server_url}/users/{id}
```

Method

PATCH

Request headers

Header name	Description	Required	Value
Content-type	The format of the data to be posted.	Required	application/json
Basic Auth	A security checkpoint that requires transmission of a username and password with every request.	Required	Basic authentication is a simple authentication scheme that is built into the HTTP protocol.

Request body

This table lists the properties you can update.

Property name	Type	Required	Description
last_name	string	yes	Last name of the user.
first_name	string	yes	First name of the user.
email	string	yes	Email address of the user.

Sample request

The PATCH body should look something like this. You can update the value of a property.

Example

This example updates the value of the email address from `a.leblanc@example.com` to `alix.leblanc@example.com`.

```
{
  "email": "alix.leblanc@example.com"
}
```

Return body

Example of the response. The email address changed.

Example

```
{
  "last_name": "Leblanc",
```

```
  "first_name": "Alix",  
  "email": "alix.leblanc@example.com",  
  "id": "1"  
}
```

Return status

Status value	Return status	Description
200	OK	Standard response for a successful HTTP request.
400	Error	Specified user record not found.
ECONNREFUSED	N/A	Service is offline. Start the service and try again.
